💼: https://github.com/himanshuanand05-works/

Education

- Bachelors(Computer Science & Engg) - JSS Academy, Noida - 72%
- Senior Secondary Education(CBSE) - City Vocational School, Meerut - 78%

Certifications & Achievements

- Next.js (LinkedIn Learning)
- NestJS (Udemy)
- Advanced Node.js (CutShort)
- All India Hackathon(SIH)
- State Hackathon (NIT)

Technical Skills

- **Languages:** Node.js, Javascript, Typescript, HTML, CSS
- **Technology/Frameworks:** Express, NestJS, NextJS, React, Angular
- **AI & Data:** LangChain, LangGraph, Agentic RAG, MCP, Fine-tuning, Azure Foundry, Cursor, Copilot
- **Cloud & Services:** AWS, GCP, Azure, Docker, Kubernetes, CI/CD, Kafka, Redis
- **Database:** MongoDB, MySQL, PostgreSQL, Vertex(VectorDB), Elastic

Personal Portfolio

- **Learning App for Toddlers:** https://himanshuanand05-works.github.io/alphabet-app/
- **Face Clustering Library:** https://www.npmjs.com/package/@himanshuanand05/face-clustering
- **AI Wellness Assistant:** https://github.com/himanshuanand05-works/AI-Financial-Wellness-Assistant

Experiences

DBiz-AI (Pickles) | Lead/Senior Software Engineer
Mar 2024 – Dec 2025

- **Reduced bundle size** of Angular app by **migrating** to the latest version, and using lightweight **standalone components** and lean DI tree. Used deferred views for heavier and slow components. And re-iterated on lazily loaded module map. This resulted in up to 25% faster screen load.
- With the new **Vite** Builder reduced the pipeline build time by 40% thus resulting in increased efficience of

developers.

- Helped build a strong highly available system with SAGA and DDD. Investigated and **resolved ghost event** issue and idempotency with **Outbox-inbox table pattern**. Added resumeable state schema approach in inbox table to handle crashes and also helps with message ordering.
- **Redesigned** services to have **lighter Domain Models** by removing heavy joins and splitting bigger Aggregate Domains into smaller Domains. Which decreased the DB query time by 50% in some cases.
- **Reduced load** on primary DB by implementing **CQRS** pattern and controlled consistency by multiple read-write acks.
- **Lead a team** of ninja developers and to build **an interactive AI based SDLC framework**. This standardized app development since the start and created a no-code setup for building prototypes and initial app designs. This helped teams in pitching ideas, building apps from scratch and maintaining proper documentation since Day 0.

HighLevel LLC | SDE III
Mar 2023 – Dec 2023

- **Build** an **Agentic RAG** system from scratch with **response grounding and RBAC.** Added protective **guardrails** to protect and **mask sensitive information**, **replace irrelevant response** and Engineered prompt to **handle hallucination**. This increased the user efficiency to handle clients, thus increased company customer retention by 15% and DAU by 10%.
- Built complete **RAG pipeline** with **Loader Service** that **Scraps websites and parses documents**. **Chunking Service** that has the capability of choosing between popular chunking strategies like **Fixed-Size, Recursive and Semantic** based on user preference and plan. **Data Retrieval Service, LLM Prompt Builder service, summarisation service etc.**
- Used event driven architecture to distribute and parallelize the operation with centralized redis-store. Added security with **Rate-limiting, RBAC, Hallucination Detection**.
- Laid down the foundation for **Fully Agentic system** by exposing current APIs via **MCP**.

iWebServices | Senior Software Engineer
2022 – 2023

- Created OMA Wizard for fintech that handles a massive amount of user data every day and store it in cassandra DB for high write throughput.
- Integrated 3rd-party graph rendering service to display properties and metadata along with relationship data for an area. This helped customers to view, compare and analyse the current state of their property in the present market and area.
- Increased page ranking and SEO by using **SSR, aria labels, metatags, HTML element restructuring**. Added skeletons to reduce CLS and chunked loading for improved LCP.
- Created remote apps for **Micro-frontend** in React and Angular both.
- Helped building a **BFF** layer to handle and orchestrate communication for the frontend.
- Used caching and.cache invalidation logic with batteries included to handle cache issues.

Contata | Software Developer

2020 – 2022

- Built a webTransport based communication channel to handle text+voice based communication between peers in a virtualized courtroom. Thus reducing the latency and creating a secured channel for communication.
- Used **STT Engine** to create live captions and transcript generation that helped in tracking and recording court proceedings. This reduced the load on stenographer and reduced the chances of error or missing facts.
- Created a document service that searches for relevant documents for a case and also allows document sharing and signing. This created a trusted environment and made citations simpler.

The Smart Cube | Associate Engineer

2018 – 2019

- Worked as a Full-Stack Engineer on the Smart Fleet Project and helped restructure the core reasoning framework which is used to track and trace expenditure and forecast trends and saving opportunities.
- Handled microservices with more than **100K DAU** and supported in bug resolutions.
- Created frontend components with integrated charts to display metrics and trends
- Created **SVG based widgets** to create a visual representation of live data coming from sensors over WAMP protocol.Used **D3** library to handle rendering at low level for high frequency data update binding and **preventing Layout Thrashing**.
- It uses **SVG** for 2-D rendering of widgets on mxGraphs, and new widgets are designed using SVG to be used to create visual dashboards for data.
